

NOVA — TO-DO LIST

Web Development Internship – Task 5

Project Report

Project Type: Responsive To-Do List Web Application

Internship: Synent Technologies – Web Development Internship

Candidate: Varsha Shekar

NOVA is a modern and responsive task-management web application designed to help users organize daily tasks, track completion progress, and filter tasks according to their status.

1. Introduction

NOVA — To-Do List is a client-side web application developed as part of Task 5 of the Synent Technologies Web Development Internship. It provides a simple interface for creating, completing, deleting, and filtering daily tasks.

2. Objective

- To develop a functional and responsive To-Do List web application.
- To allow users to add, complete, and delete tasks.
- To provide All, Active, and Completed task filters.
- To display task statistics such as Total, Completed, and Remaining.
- To retain tasks after page refresh using browser LocalStorage.

3. Technologies Used

Technology	Purpose
HTML5	Structure and content of the application
CSS3	Styling, layout and responsive design
JavaScript	Task management and interactive functionality
LocalStorage	Persisting task data in the browser

4. Main Features

- Add new tasks using the task input field and Add Task button.
- Mark tasks as completed using the task checkbox.
- Delete tasks from the list.
- Filter tasks using All, Active, and Completed options.
- Display Total, Completed, and Remaining task statistics.
- Prevent duplicate tasks.
- Support Enter key for adding tasks.
- Persist tasks using LocalStorage.
- Responsive layout for desktop and smaller screens.

5. Implementation / Methodology

The application was implemented using HTML for the interface structure, CSS for the visual design and responsive layout, and JavaScript for task operations. Tasks are maintained in the browser and the displayed list and statistics are updated according to task status. Filter controls allow the user to view all tasks, only active tasks, or only completed tasks.

6. Project Structure

index.html: Main application structure

style.css: Application styling and responsive rules

script.js: Task management and interactive behaviour

README.md: Project documentation

7. Result

The NOVA To-Do List application was successfully developed as a functional responsive web application. The screenshots demonstrate task creation, task completion, statistics, and filtering functionality.

8. Conclusion

This project provided practical experience in developing interactive front-end applications using HTML, CSS and JavaScript. It also demonstrated client-side data persistence, responsive design, event handling, filtering and dynamic UI updates.

9. Project Submission

The project source code and documentation are maintained in a public GitHub repository and the application is deployed using GitHub Pages.
